## Installation Instructions

**NOTE:** Read installation instructions thoroughly before starting installation process.

**Step 1:** Lay out area and prepare site for install. Concrete must be installed over a solid, level base. Check local soil condition and codes. See installation instructions sheet for minimum use zone requirements to ensure proper spacing and adequate surfacing area. Excavate appropriate footer size for your installation.

**Step 2:** Refer to typical 36" footing details on the typical footing detail in these instructions.

**Step 3:** Assemble top rail and support posts and insert the bolts and lock washers from the top. Use thread lock liquid and tighten the bolt into the barrel nut. Silicone caulk the bolt holes. Lift this assembly into excavated footings, bracing when level and plumb. Pour a concrete footing for the swings. This concrete should be flush with the sub-grade surface. Allow time for the concrete to completely cure before continuing.

**Step 4:** Remove temporary bracing.

**Step 5:** Assemble belt and/or bucket seats, chains, and clamps, then install onto the 3-1/2" diameter top rail per manufacturers instructions. Refer to the surfacing manufacturer for installation of an approved impact attenuating play surface around the swings the minimum shown on the Tree Trunk Swing installation instructions.
